SCSE3040 — Machine Learning Operations

Practical 05: Settings in a File, Bugs Caught by a Robot · Lab Submission Record

1. Student & Laboratory Session Information

Student Name:	Vishesh Aggarwal	**Roll Number:**	S24CSEU2521
Batch:	Batch 2024–2028 (Session 2026–27)	**Date of Session:**	4 October 2026

2. Repository Link

https://github.com/visheshaggarwal0/MLOps_Lab

3. Contents of config.yaml

```
# Settings for the delivery-time model.
# Change values here, never in the code.

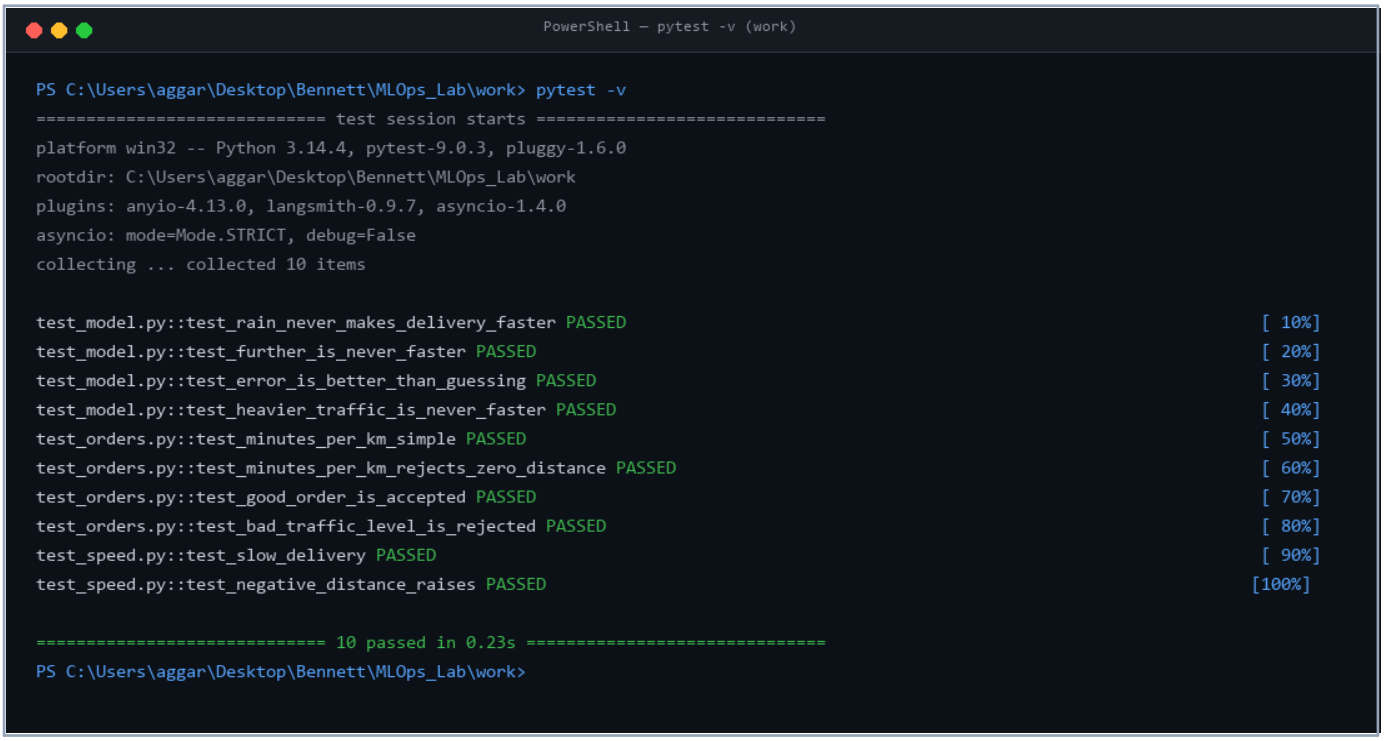

data:
  path: ../data/delivery_times.csv
  features:
    - distance_km
    - prep_time_min
    - traffic_level
    - rain
  target: delivery_min

split:
  test_size: 0.2
  seed: 42

model:
  name: linear_regression

training:
  max_rows: 300
```

4. Terminal Verification — pytest Test Suite Output

5. Model Output Comparison (Before vs. After Refactor)

Before the refactor, the baseline pipeline produced an MAE of **1.92 minutes**; **after refactoring** to use config.yaml, it produces an MAE of **1.92 minutes** (and **2.18 minutes** when constrained to the first 300 orders via the Task T1 max_rows: 300 setting).

6. AI Use Disclosure

Antigravity (powered by Gemini Flash) was utilized to assist in formatting the laboratory submission report, organizing the configuration content, and generating the terminal test verification artifact in accordance with the SCSE3040 course academic integrity policy.
